

# Package ‘climaemet’

June 23, 2024

**Title** Climate AEMET Tools

**Version** 1.3.0

**Description** Tools to download the climatic data of the Spanish Meteorological Agency (AEMET) directly from R using their API and create scientific graphs (climate charts, trend analysis of climate time series, temperature and precipitation anomalies maps, warming stripes graphics, climatograms, etc.).

**License** GPL-3

**URL** <https://ropenspain.github.io/climaemet/>,  
<https://github.com/rOpenSpain/climaemet>

**BugReports** <https://github.com/rOpenSpain/climaemet/issues>

**Depends** R (>= 3.6.0)

**Imports** cli (>= 3.0.0), dplyr (>= 1.0.0), ggplot2 (>= 3.3.2), httr2 (>= 1.0.0), jsonlite (>= 1.7.0), rappdirs (>= 0.3.3), readr (>= 1.4.0), rlang (>= 0.4.6), tibble (>= 3.0.3), tidyr (>= 1.1.0)

**Suggests** climatol (>= 3.1.2), gganimate (>= 1.0.5), jpeg (>= 0.1.8), knitr, lifecycle, lubridate, mapSpain, rmarkdown, scales, sf (>= 0.9.0), testthat (>= 3.0.0)

**VignetteBuilder** knitr

**Config/Needs/website** cpp11, crosstalk, devtools, geofacet, geoR, gifski, gstat, leaflet, reactable, scales, sf, terra, tidyterra, tidyverse, usethis

**Config/testthat/edition** 3

**Config/testthat/parallel** true

**Copyright** © AEMET. See file COPYRIGHTS

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 7.3.1

**X-schema.org-applicationCategory** Meteorology

**X-schema.org-isPartOf** <https://ropenspain.es/>

**NeedsCompilation** no

**Author** Manuel Pizarro [aut, cph] (<<https://orcid.org/0000-0002-6981-0154>>),  
 Diego Hernangómez [aut, cre] (<<https://orcid.org/0000-0001-8457-4658>>,

---

aemet_api_key	<i>Install an AEMET API Key</i>
---------------	---------------------------------

---

### Description

This function will store your AEMET API key on your local machine so it can be called securely without being stored in your code.

Alternatively, you can install the API Key manually:

- Run `Sys.setenv(AEMET_API_KEY = "Your_Key")`. You would need to run this command on each session (Similar to `install = FALSE`).
- Write this line on your `.Renviro`n file: `AEMET_API_KEY = "Your_Key"` (same behavior than `install = TRUE`). This would store your API key permanently.

### Usage

```
aemet_api_key(apikey, overwrite = FALSE, install = FALSE)
```

### Arguments

apikey	The API key provided to you from the AEMET formatted in quotes. A key can be acquired at <a href="https://opendata.aemet.es/centrodedescargas/inicio">https://opendata.aemet.es/centrodedescargas/inicio</a> . You can install several API Keys as a vector of characters, see <b>Details</b> .
overwrite	If this is set to TRUE, it will overwrite an existing AEMET_API_KEY that you already have in local machine.
install	if TRUE, will install the key in your local machine for use in future sessions. Defaults to FALSE.

### Details

You can pass several `apikey` values as a vector `c(api1, api2)`, in this case several AEMET\_API\_KEY values would be generated. In each subsequent `api` call **climaemet** would randomly choose one of the provided API keys.

This is useful when performing batch queries to avoid API throttling.

### Value

None

### Note

To locate your API Key on your local machine, run `rappdirs::user_cache_dir("climaemet", "R")`.

### See Also

Other `aemet_auth`: [aemet\\_detect\\_api\\_key\(\)](#)

**Examples**

```
# Don't run these examples!

if (FALSE) {
  aemet_api_key("111111abc", install = TRUE)

  # You can check it with:
  Sys.getenv("AEMET_API_KEY")
}

if (FALSE) {
  # If you need to overwrite an existing key:
  aemet_api_key("222222abc", overwrite = TRUE, install = TRUE)

  # You can check it with:
  Sys.getenv("AEMET_API_KEY")
}
```

---

aemet\_beaches

*AEMET beaches*

---

**Description**

Get AEMET beaches.

**Usage**

```
aemet_beaches(verbose = FALSE, return_sf = FALSE)
```

**Arguments**

verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.
return_sf	Logical TRUE or FALSE. Should the function return an <code>sf</code> spatial object? If FALSE (the default value) it returns a <code>tibble</code> . Note that you need to have the <code>sf</code> package installed.

**Details**

The first result of the API call on each session is (temporarily) cached in the assigned `tempdir()` for avoiding unneeded API calls.

**Value**

A `tibble` or a `sf` object.

**API Key**

You need to set your API Key globally using `aemet_api_key()`.

**See Also**

[aemet\\_forecast\\_beaches\(\)](#)

Other aemet\_api\_data: [aemet\\_daily\\_clim\(\)](#), [aemet\\_extremes\\_clim\(\)](#), [aemet\\_forecast\\_beaches\(\)](#), [aemet\\_forecast\\_daily\(\)](#), [aemet\\_last\\_obs\(\)](#), [aemet\\_monthly](#), [aemet\\_normal](#), [aemet\\_stations\(\)](#)

**Examples**

```
library(tibble)
beaches <- aemet_beaches()
beaches

# Cached during this R session
beaches2 <- aemet_beaches(verbose = TRUE)

identical(beaches, beaches2)

# Select an map beaches
library(dplyr)
library(ggplot2)
library(mapSpain)

# Alicante / Alacant
beaches_sf <- aemet_beaches(return_sf = TRUE) %>%
  filter(ID_PROVINCIA == "03")

prov <- mapSpain::esp_get_prov("Alicante")

ggplot(prov) +
  geom_sf() +
  geom_sf(
    data = beaches_sf, shape = 4, size = 2.5,
    color = "blue"
  )
```

---

aemet_daily_clim	<i>Daily/annual climatology values</i>
------------------	--

---

**Description**

Get climatology values for a station or for all the available stations. Note that `aemet_daily_period()` and `aemet_daily_period_all()` are shortcuts of `aemet_daily_clim()`.

**Usage**

```
aemet_daily_clim(
  station = "all",
  start = Sys.Date() - 7,
```

```

    end = Sys.Date(),
    verbose = FALSE,
    return_sf = FALSE,
    extract_metadata = FALSE,
    progress = TRUE
  )

aemet_daily_period(
  station,
  start = as.integer(format(Sys.Date(), "%Y")),
  end = start,
  verbose = FALSE,
  return_sf = FALSE,
  extract_metadata = FALSE,
  progress = TRUE
)

aemet_daily_period_all(
  start = as.integer(format(Sys.Date(), "%Y")),
  end = start,
  verbose = FALSE,
  return_sf = FALSE,
  extract_metadata = FALSE,
  progress = TRUE
)

```

### Arguments

station	Character string with station identifier code(s) (see <a href="#">aemet_stations()</a> ) or "all" for all the stations.
start, end	Character string with start and end date. See <b>Details</b> .
verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.
return_sf	Logical TRUE or FALSE. Should the function return an <a href="#">sf</a> spatial object? If FALSE (the default value) it returns a <a href="#">tibble</a> . Note that you need to have the <a href="#">sf</a> package installed.
extract_metadata	Logical TRUE/FALSE. On TRUE the output is a <a href="#">tibble</a> with the description of the fields. See also <a href="#">get_metadata_aemet()</a> .
progress	Logical, display a <a href="#">cli::cli_progress_bar()</a> object. If verbose = TRUE won't be displayed.

### Details

start and end parameters should be:

- For [aemet\\_daily\\_clim\(\)](#): A Date object or a string with format: YYYY-MM-DD ("2020-12-31") coercible with [as.Date\(\)](#).

- For `aemet_daily_period()` and `aemet_daily_period_all()`: A string representing the year(s) to be extracted: "2020", "2018".

**Value**

A `tibble` or a `sf` object.

**API Key**

You need to set your API Key globally using `aemet_api_key()`.

**See Also**

`aemet_api_key()`, `as.Date()`

Other `aemet_api_data`: `aemet_beaches()`, `aemet_extremes_clim()`, `aemet_forecast_beaches()`, `aemet_forecast_daily()`, `aemet_last_obs()`, `aemet_monthly`, `aemet_normal`, `aemet_stations()`

**Examples**

```
library(tibble)
obs <- aemet_daily_clim(c("9434", "3195"))
glimpse(obs)

# Metadata
meta <- aemet_daily_clim(c("9434", "3195"), extract_metadata = TRUE)

glimpse(meta$campos)
```

---

`aemet_detect_api_key` *Check if an AEMET API Key is present for the current session*

---

**Description**

The function would detect if an API Key is available on this session:

- If an API Key is already set as an environment variable it would be preserved
- If no environment variable has been set and you have stored permanently an API Key using `aemet_api_key()`, the latter would be loaded.

**Usage**

```
aemet_detect_api_key(...)
```

```
aemet_show_api_key(...)
```

**Arguments**

... Ignored

**Value**

TRUE or FALSE. `aemet_show_api_key()` would display your stored API keys.

**See Also**

Other `aemet_auth`: [aemet\\_api\\_key\(\)](#)

**Examples**

```
aemet_detect_api_key()

# CAUTION: This may reveal API Keys
if (FALSE) {
  aemet_show_api_key()
}
```

---

`aemet_extremes_clim` *Extreme values for a station*

---

**Description**

Get recorded extreme values for a station.

**Usage**

```
aemet_extremes_clim(
  station = NULL,
  parameter = "T",
  verbose = FALSE,
  return_sf = FALSE,
  extract_metadata = FALSE,
  progress = TRUE
)
```

**Arguments**

<code>station</code>	Character string with station identifier code(s) (see <a href="#">aemet_stations()</a> ).
<code>parameter</code>	Character string as temperature ("T"), precipitation ("P") or wind ("V") parameter.
<code>verbose</code>	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.

return_sf	Logical TRUE or FALSE. Should the function return an <b>sf</b> spatial object? If FALSE (the default value) it returns a <b>tibble</b> . Note that you need to have the <b>sf</b> package installed.
extract_metadata	Logical TRUE/FALSE. On TRUE the output is a <b>tibble</b> with the description of the fields. See also <code>get_metadata_aemet()</code> .
progress	Logical, display a <code>cli::cli_progress_bar()</code> object. If verbose = TRUE won't be displayed.

### Value

A **tibble** or a **sf** object. If the function finds an error when parsing it would return the result as a `list()` object.

### API Key

You need to set your API Key globally using `aemet_api_key()`.

### See Also

`aemet_api_key()`

Other `aemet_api_data`: `aemet_beaches()`, `aemet_daily_clim()`, `aemet_forecast_beaches()`, `aemet_forecast_daily()`, `aemet_last_obs()`, `aemet_monthly`, `aemet_normal`, `aemet_stations()`

### Examples

```
library(tibble)
obs <- aemet_extremes_clim(c("9434", "3195"))
glimpse(obs)
```

---

aemet\_forecast\_beaches

*Forecast database for beaches*

---

### Description

Get a database of daily weather forecasts for a beach. Beach database can be accessed with `aemet_beaches()`.

### Usage

```
aemet_forecast_beaches(
  x,
  verbose = FALSE,
  return_sf = FALSE,
  extract_metadata = FALSE,
  progress = TRUE
)
```

**Arguments**

x	A vector of beaches codes to extract. See <a href="#">aemet_beaches()</a> .
verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.
return_sf	Logical TRUE or FALSE. Should the function return an <a href="#">sf</a> spatial object? If FALSE (the default value) it returns a <a href="#">tibble</a> . Note that you need to have the <a href="#">sf</a> package installed.
extract_metadata	Logical TRUE/FALSE. On TRUE the output is a <a href="#">tibble</a> with the description of the fields. See also <a href="#">get_metadata_aemet()</a> .
progress	Logical, display a <a href="#">cli::cli_progress_bar()</a> object. If verbose = TRUE won't be displayed.

**Value**

A [tibble](#) or a [sf](#) object.

**API Key**

You need to set your API Key globally using [aemet\\_api\\_key\(\)](#).

**See Also**

[aemet\\_beaches\(\)](#) for beaches codes.

Other [aemet\\_api\\_data](#): [aemet\\_beaches\(\)](#), [aemet\\_daily\\_clim\(\)](#), [aemet\\_extremes\\_clim\(\)](#), [aemet\\_forecast\\_daily\(\)](#), [aemet\\_last\\_obs\(\)](#), [aemet\\_monthly](#), [aemet\\_normal](#), [aemet\\_stations\(\)](#)

Other forecasts: [aemet\\_forecast\\_daily\(\)](#), [aemet\\_forecast\\_tidy\(\)](#)

**Examples**

```
# Forecast for beaches in Palma, Mallorca
library(dplyr)
library(ggplot2)

palma_b <- aemet_beaches() %>%
  filter(ID_MUNICIPIO == "07040")

forecast_b <- aemet_forecast_beaches(palma_b$ID_PLAYA)
glimpse(forecast_b)

ggplot(forecast_b) +
  geom_line(aes(fecha, tagua_valor1, color = nombre)) +
  facet_wrap(~nombre, ncol = 1) +
  labs(
    title = "Water temperature in beaches of Palma (ES)",
    subtitle = "Forecast 3-days",
    x = "Date",
    y = "Temperature (Celsius)",
    color = "Beach"
```

```
)
```

---

aemet\_forecast\_daily *Forecast database by municipality*

---

## Description

Get a database of daily or hourly weather forecasts for a given municipality.

## Usage

```
aemet_forecast_daily(
  x,
  verbose = FALSE,
  extract_metadata = FALSE,
  progress = TRUE
)
```

```
aemet_forecast_hourly(
  x,
  verbose = FALSE,
  extract_metadata = FALSE,
  progress = TRUE
)
```

## Arguments

x	A vector of municipality codes to extract. For convenience, <b>climaemet</b> provides this data on the dataset <b>aemet_munic</b> (see <code>municipio</code> field) as of January 2024.
verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.
extract_metadata	Logical TRUE/FALSE. On TRUE the output is a <b>tibble</b> with the description of the fields. See also <code>get_metadata_aemet()</code> .
progress	Logical, display a <code>cli::cli_progress_bar()</code> object. If <code>verbose = TRUE</code> won't be displayed.

## Details

Forecasts format provided by the AEMET API have a complex structure. Although **climaemet** returns a **tibble**, each forecasted value is provided as a nested **tibble**. `aemet_forecast_tidy()` helper function can unnest these values and provide a single unnested **tibble** for the requested variable.

If `extract_metadata = TRUE` a simple **tibble** describing the value of each field of the forecast is returned.

**Value**

A nested [tibble](#). Forecasted values can be extracted with [aemet\\_forecast\\_tidy\(\)](#). See also **Details**.

**API Key**

You need to set your API Key globally using [aemet\\_api\\_key\(\)](#).

**See Also**

[aemet\\_munic](#) for municipality codes and [mapSpain](#) package for working with sf objects of municipalities (see [mapSpain::esp\\_get\\_munic\(\)](#) and **Examples**).

Other [aemet\\_api\\_data](#): [aemet\\_beaches\(\)](#), [aemet\\_daily\\_clim\(\)](#), [aemet\\_extremes\\_clim\(\)](#), [aemet\\_forecast\\_beaches\(\)](#), [aemet\\_last\\_obs\(\)](#), [aemet\\_monthly](#), [aemet\\_normal](#), [aemet\\_stations\(\)](#)

Other forecasts: [aemet\\_forecast\\_beaches\(\)](#), [aemet\\_forecast\\_tidy\(\)](#)

**Examples**

```
# Select a city
data("aemet_munic")
library(dplyr)
munis <- aemet_munic %>%
  filter(municipio_nombre %in% c("Santiago de Compostela", "Lugo")) %>%
  pull(municipio)

daily <- aemet_forecast_daily(munis)

# Metadata

  )

```

)

---

aemet\_forecast\_tidy *Helper functions for extracting forecasts*

---

## Description

**[Experimental]** Helpers for `aemet_forecast_daily()` and `aemet_forecast_hourly()`:

- `aemet_forecast_vars_available()` extracts the values available on the dataset.
- `aemet_forecast_tidy()` produces a `tibble` with the forecast for `var`.

## Usage

```
aemet_forecast_tidy(x, var)
```

```
aemet_forecast_vars_available(x)
```

## Arguments

`x` A database extracted with `aemet_forecast_daily()` or `aemet_forecast_hourly()`.  
`var` Name of the desired var to extract

## Value

A vector of characters (`aemet_forecast_vars_available()`) or a `tibble` (`aemet_forecast_tidy()`).

## See Also

Other forecasts: `aemet_forecast_beaches()`, `aemet_forecast_daily()`

## Examples

```
# Hourly values
hourly <- aemet_forecast_hourly(c("15030", "28080"))

# Vars available
aemet_forecast_vars_available(hourly)

# Get temperature
temp <- aemet_forecast_tidy(hourly, "temperatura")

library(dplyr)
# Make hour - Need lubridate to adjust timezones
temp_end <- temp %>%
  mutate(
    forecast_time = lubridate::force_tz(
      as.POSIXct(fecha) + hora,
```

```

      tz = "Europe/Madrid"
    )
  )

# Add also sunset and sunrise
suns <- temp_end %>%
  select(nombre, fecha, orto, ocase) %>%
  distinct_all() %>%
  group_by(nombre) %>%
  mutate(
    ocase_end = lubridate::force_tz(
      as.POSIXct(fecha) + ocase,
      tz = "Europe/Madrid"
    ),
    orto_end = lubridate::force_tz(
      as.POSIXct(fecha) + orto,
      tz = "Europe/Madrid"
    ),
    orto_lead = lead(orto_end)
  ) %>%
  tidyr::drop_na()

# Plot

library(ggplot2)

ggplot(temp_end) +
  geom_rect(data = suns, aes(
    xmin = ocase_end, xmax = orto_lead,
    ymin = min(temp_end$temperatura),
    ymax = max(temp_end$temperatura)
  ), alpha = .4) +
  geom_line(aes(forecast_time, temperatura), color = "blue4") +
  facet_wrap(~nombre, nrow = 2) +
  scale_x_datetime(labels = scales::label_date_short()) +
  scale_y_continuous(labels = scales::label_number(suffix = "°")) +
  labs(
    x = "", y = "",
    title = "Forecast: Temperature",
    subtitle = paste("Forecast produced on", format(temp_end$elaborado[1],
      usetz = TRUE
    ))
  )
)

```

**Description**

Get last observation values for a station.

**Usage**

```
aemet_last_obs(
  station = "all",
  verbose = FALSE,
  return_sf = FALSE,
  extract_metadata = FALSE,
  progress = TRUE
)
```

**Arguments**

station	Character string with station identifier code(s) (see <a href="#">aemet_stations()</a> ) or "all" for all the stations.
verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.
return_sf	Logical TRUE or FALSE. Should the function return an <a href="#">sf</a> spatial object? If FALSE (the default value) it returns a <a href="#">tibble</a> . Note that you need to have the <a href="#">sf</a> package installed.
extract_metadata	Logical TRUE/FALSE. On TRUE the output is a <a href="#">tibble</a> with the description of the fields. See also <a href="#">get_metadata_aemet()</a> .
progress	Logical, display a <a href="#">cli::cli_progress_bar()</a> object. If verbose = TRUE won't be displayed.

**Value**

A [tibble](#) or a [sf](#) object

**API Key**

You need to set your API Key globally using [aemet\\_api\\_key\(\)](#).

**See Also**

Other aemet\_api\_data: [aemet\\_beaches\(\)](#), [aemet\\_daily\\_clim\(\)](#), [aemet\\_extremes\\_clim\(\)](#), [aemet\\_forecast\\_beaches\(\)](#), [aemet\\_forecast\\_daily\(\)](#), [aemet\\_monthly](#), [aemet\\_normal](#), [aemet\\_stations\(\)](#)

**Examples**

```
library(tibble)
obs <- aemet_last_obs(c("9434", "3195"))
glimpse(obs)
```

---

aemet_monthly	<i>Monthly/annual climatology</i>
---------------	-----------------------------------

---

## Description

Get monthly/annual climatology values for a station or all the stations. `aemet_monthly_period()` and `aemet_monthly_period_all()` allows requests that span several years.

## Usage

```
aemet_monthly_clim(  
  station = NULL,  
  year = as.integer(format(Sys.Date(), "%Y")),  
  verbose = FALSE,  
  return_sf = FALSE,  
  extract_metadata = FALSE,  
  progress = TRUE  
)  
  
aemet_monthly_period(  
  station = NULL,  
  start = as.integer(format(Sys.Date(), "%Y")),  
  end = start,  
  verbose = FALSE,  
  return_sf = FALSE,  
  extract_metadata = FALSE,  
  progress = TRUE  
)  
  
aemet_monthly_period_all(  
  start = as.integer(format(Sys.Date(), "%Y")),  
  end = start,  
  verbose = FALSE,  
  return_sf = FALSE,  
  extract_metadata = FALSE,  
  progress = TRUE  
)
```

## Arguments

station	Character string with station identifier code(s) (see <a href="#">aemet_stations()</a> ).
year	Numeric value as date (format: YYYY).
verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.
return_sf	Logical TRUE or FALSE. Should the function return an <code>sf</code> spatial object? If FALSE (the default value) it returns a <code>tibble</code> . Note that you need to have the <code>sf</code> package installed.

extract_metadata	Logical TRUE/FALSE. On TRUE the output is a <a href="#">tibble</a> with the description of the fields. See also <a href="#">get_metadata_aemet()</a> .
progress	Logical, display a <a href="#">cli::cli_progress_bar()</a> object. If verbose = TRUE won't be displayed.
start	Numeric value as start year (format: YYYY).
end	Numeric value as end year (format: YYYY).

**Value**

A [tibble](#) or a [sf](#) object.

**API Key**

You need to set your API Key globally using [aemet\\_api\\_key\(\)](#).

**See Also**

Other `aemet_api_data`: [aemet\\_beaches\(\)](#), [aemet\\_daily\\_clim\(\)](#), [aemet\\_extremes\\_clim\(\)](#), [aemet\\_forecast\\_beaches\(\)](#), [aemet\\_forecast\\_daily\(\)](#), [aemet\\_last\\_obs\(\)](#), [aemet\\_normal](#), [aemet\\_stations\(\)](#)

**Examples**

```
library(tibble)
obs <- aemet_monthly_clim(station = c("9434", "3195"), year = 2000)
glimpse(obs)
```

---

aemet\_munic

*Data set with all the municipalities of Spain*

---

**Description**

A [tibble](#) with all the municipalities of Spain as defined by the INE (Instituto Nacional de Estadística) as of January 2024.

**Format**

A [tibble](#) with 8,132 rows and fields:

**municipio** INE code of the municipality.

**municipio\_nombre** INE name of the municipality.

**cpro** INE code of the province.

**cpro\_nombre** INE name of the province.

**codauto** INE code of the autonomous community.

**codauto\_nombre** INE code of the autonomous community.

**Source**

INE, [Municipality codes by province](#)

**See Also**

[aemet\\_forecast\\_daily\(\)](#), [aemet\\_forecast\\_hourly\(\)](#)

Other dataset: [climaemet\\_9434\\_climatogram](#), [climaemet\\_9434\\_temp](#), [climaemet\\_9434\\_wind](#)

**Examples**

```
data(aemet_munic)
```

```
aemet_munic
```

---

aemet_normal	<i>Normal climatology values</i>
--------------	----------------------------------

---

**Description**

Get normal climatology values for a station (or all the stations with `aemet_normal_clim_all()`). Standard climatology from 1981 to 2010.

**Usage**

```
aemet_normal_clim(  
  station = NULL,  
  verbose = FALSE,  
  return_sf = FALSE,  
  extract_metadata = FALSE,  
  progress = TRUE  
)
```

```
aemet_normal_clim_all(  
  verbose = FALSE,  
  return_sf = FALSE,  
  extract_metadata = FALSE,  
  progress = TRUE  
)
```

**Arguments**

station	Character string with station identifier code(s) (see <a href="#">aemet_stations()</a> ) or "all" for all the stations.
verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.

return_sf	Logical TRUE or FALSE. Should the function return an <code>sf</code> spatial object? If FALSE (the default value) it returns a <code>tibble</code> . Note that you need to have the <code>sf</code> package installed.
extract_metadata	Logical TRUE/FALSE. On TRUE the output is a <code>tibble</code> with the description of the fields. See also <code>get_metadata_aemet()</code> .
progress	Logical, display a <code>cli::cli_progress_bar()</code> object. If verbose = TRUE won't be displayed.

**Value**

A `tibble` or a `sf` object.

**API Key**

You need to set your API Key globally using `aemet_api_key()`.

**Note**

Code modified from project <https://github.com/SevillaR/aemet>.

**See Also**

Other `aemet_api_data`: `aemet_beaches()`, `aemet_daily_clim()`, `aemet_extremes_clim()`, `aemet_forecast_beaches()`, `aemet_forecast_daily()`, `aemet_last_obs()`, `aemet_monthly`, `aemet_stations()`

**Examples**

```
library(tibble)
obs <- aemet_normal_clim(c("9434", "3195"))
glimpse(obs)
```

---

aemet\_stations

*AEMET stations*

---

**Description**

Get AEMET stations.

**Usage**

```
aemet_stations(verbose = FALSE, return_sf = FALSE)
```

## Arguments

verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.
return_sf	Logical TRUE or FALSE. Should the function return an <code>sf</code> spatial object? If FALSE (the default value) it returns a <code>tibble</code> . Note that you need to have the <code>sf</code> package installed.

## Details

The first result of the API call on each session is (temporarily) cached in the assigned `tempdir()` for avoiding unneeded API calls.

## Value

A `tibble` or a `sf` object.

## API Key

You need to set your API Key globally using `aemet_api_key()`.

## Note

Code modified from project <https://github.com/SevillaR/aemet>.

## See Also

Other `aemet_api_data`: `aemet_beaches()`, `aemet_daily_clim()`, `aemet_extremes_clim()`, `aemet_forecast_beaches()`, `aemet_forecast_daily()`, `aemet_last_obs()`, `aemet_monthly`, `aemet_normal`

## Examples

```
library(tibble)
stations <- aemet_stations()
stations

# Cached during this R session
stations2 <- aemet_stations(verbose = TRUE)

identical(stations, stations2)
```

---

```
climaemet_9434_climatogram
```

*Climatogram data for Zaragoza Airport ("9434") period 1981-2010*

---

### Description

Normal data for Zaragoza Airport (1981-2010). This is an example dataset used to plot climatograms.

### Format

A data.frame with columns 1 to 12 (months) and rows:

**p\_mes\_md** Precipitation (mm).

**tm\_max\_md** Maximum temperature (Celsius).

**tm\_min\_md** Minimum temperature (Celsius).

**ta\_min\_md** Absolute monthly minimum temperature (Celsius).

### Source

AEMET.

### See Also

[ggclimat\\_walter\\_lieth\(\)](#), [climatogram\\_period\(\)](#), [climatogram\\_normal\(\)](#)

Other dataset: [aemet\\_munic](#), [climaemet\\_9434\\_temp](#), [climaemet\\_9434\\_wind](#)

Other climatogram: [climatogram\\_normal\(\)](#), [climatogram\\_period\(\)](#), [ggclimat\\_walter\\_lieth\(\)](#)

### Examples

```
data(climaemet_9434_climatogram)
```

---

```
climaemet_9434_temp  Average annual temperatures for Zaragoza Airport ("9434") period  
                    1950-2020
```

---

### Description

Yearly observations of average temperature for Zaragoza Airport (1950-2020). This is an example dataset.

### Format

A [tibble](#) with columns:

**year** Year of reference.

**indicativo** Identifier of the station.

**temp** Average temperature (Celsius).

**Source**

AEMET.

**See Also**

Other dataset: [aemet\\_munic](#), [climaemet\\_9434\\_climatogram](#), [climaemet\\_9434\\_wind](#)

Other stripes: [climatestripes\\_station\(\)](#), [ggstripes\(\)](#)

**Examples**

```
data(climaemet_9434_temp)
```

---

climaemet_9434_wind	<i>Wind conditions for Zaragoza Airport ("9434") period 2000-2020</i>
---------------------	---

---

**Description**

Daily observations of wind speed and directions for Zaragoza Airport (2000-2020). This is an example dataset.

**Format**

A [tibble](#) with columns:

**fecha** Date of observation.

**dir** Wind directions (0-360).

**velmedia** Average wind speed (km/h)

**Source**

AEMET.

**See Also**

Other dataset: [aemet\\_munic](#), [climaemet\\_9434\\_climatogram](#), [climaemet\\_9434\\_temp](#)

Other wind: [ggwindrose\(\)](#), [windrose\\_days\(\)](#), [windrose\\_period\(\)](#)

**Examples**

```
data(climaemet_9434_wind)
```

---

climaemet\_news      *climaemet\_news*

---

**Description**

Show the NEWS file of the **climaemet** package.

**Usage**

```
climaemet_news()
```

**Details**

(See description)

**Value**

Open NEWS from climaemet.

**See Also**

Other helpers: [dms2decdegrees\(\)](#), [first\\_day\\_of\\_year\(\)](#)

**Examples**

```
## Not run:  
climaemet_news()  
  
## End(Not run)
```

---

climatestripes\_station  
*Station climate stripes graph*

---

**Description**

Plot climate stripes graph for a station.

**Usage**

```
climatestripes_station(  
  station,  
  start = 1950,  
  end = 2020,  
  with_labels = "yes",  
  verbose = FALSE,  
  ...  
)
```

**Arguments**

station	Character string with station identifier code(s) (see <a href="#">aemet_stations()</a> ).
start	Numeric value as start year (format: YYYY).
end	Numeric value as end year (format: YYYY).
with_labels	Character string as yes/no. Indicates whether to use labels for the graph or not.
verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.
...	Arguments passed on to <a href="#">ggstripes</a>
n_temp	Numeric value as the number of colors of the palette. (default 11).
col_pal	Character string indicating the name of the <a href="#">hcl.pals()</a> color palette to be used for plotting.

**Value**

A **ggplot2** object

**API Key**

You need to set your API Key globally using [aemet\\_api\\_key\(\)](#).

**See Also**

[ggstripes\(\)](#)

Other aemet\_plots: [climatogram\\_normal\(\)](#), [climatogram\\_period\(\)](#), [ggclimat\\_walter\\_lieth\(\)](#), [ggstripes\(\)](#), [ggwindrose\(\)](#), [windrose\\_days\(\)](#), [windrose\\_period\(\)](#)

Other stripes: [climaemet\\_9434\\_temp](#), [ggstripes\(\)](#)

**Examples**

```
climatestripes_station(
  "9434",
  start = 2010,
  end = 2020,
  with_labels = "yes",
  col_pal = "Inferno"
)
```

---

climatogram\_normal     *Walter & Lieth climatic diagram from normal climatology values*

---

### Description

Plot of a Walter & Lieth climatic diagram from normal climatology data for a station. This climatogram are great for showing a summary of climate conditions for a place over a time period (1981-2010).

### Usage

```
climatogram_normal(  
  station,  
  labels = "en",  
  verbose = FALSE,  
  ggplot2 = TRUE,  
  ...  
)
```

### Arguments

station	Character string with station identifier code(s) (see <a href="#">aemet_stations()</a> ).
labels	Character string as month labels for the X axis: "en" (english), "es" (spanish), "fr" (french), etc.
verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.
ggplot2	TRUE/FALSE. On TRUE the function uses <a href="#">ggclimat_walter_lieth()</a> , if FALSE uses <a href="#">climatol::diagwl()</a> .
...	Further arguments to <a href="#">climatol::diagwl()</a> or <a href="#">ggclimat_walter_lieth()</a> , depending on the value of <b>ggplot2</b> .

### Value

A plot.

### API Key

You need to set your API Key globally using [aemet\\_api\\_key\(\)](#).

### Note

The code is based on code from the CRAN package **climatol**.

climatogram_normal("9434")
```

---

<code>climatogram_period</code>	<i>Walter &amp; Lieth climatic diagram for a time period</i>
---------------------------------	--

---

**Description**

Plot of a Walter & Lieth climatic diagram from monthly climatology data for a station. This climatogram are great for showing a summary of climate conditions for a place over a specific time period.

**Usage**

```
climatogram_period(
  station = NULL,
  start = 1990,
  end = 2020,
  labels = "en",
  verbose = FALSE,
  ggplot2 = TRUE,
  ...
)
```

**Arguments**

<code>station</code>	Character string with station identifier code(s) (see <code>aemet_stations()</code> ).
<code>start</code>	Numeric value as start year (format: YYYY).
<code>end</code>	Numeric value as end year (format: YYYY).
<code>labels</code>	Character string as month labels for the X axis: "en" (english), "es" (spanish), "fr" (french), etc.

verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.
ggplot2	TRUE/FALSE. On TRUE the function uses <code>ggclimat_walter_lieth()</code> , if FALSE uses <code>climatol::diagwl()</code> .
...	Further arguments to <code>climatol::diagwl()</code> or <code>ggclimat_walter_lieth()</code> , depending on the value of <b>ggplot2</b> .

### Value

A plot.

### API Key

You need to set your API Key globally using `aemet_api_key()`.

### Note

The code is based on code from the CRAN package **climatol**.

climatogram_period("9434", start = 2015, end = 2020, labels = "en")
```

---

dms2decdegrees	<i>Converts dms to decimal degrees</i>
----------------	--

---

**Description**

Converts degrees, minutes and seconds to decimal degrees.

**Usage**

```
dms2decdegrees(input = NULL)
```

```
dms2decdegrees_2(input = NULL)
```

**Arguments**

input            Character string as DMS coordinates.

**Value**

A numeric value.

**Note**

Code for `dms2decdegrees()` modified from project <https://github.com/SevillaR/aemet>.

**See Also**

Other helpers: `climaemet_news()`, `first_day_of_year()`

**Examples**

```
dms2decdegrees("055245W")  
dms2decdegrees_2("-3° 40' 37\"")
```

---

first_day_of_year	<i>First and last day of year</i>
-------------------	-----------------------------------

---

**Description**

Get first and last day of year.

**Usage**

```
first_day_of_year(year = NULL)
```

```
last_day_of_year(year = NULL)
```

**Arguments**

year                    Numeric value as year (format: YYYY).

**Value**

Character string as date (format: YYYY-MM-DD).

**See Also**

Other helpers: [climaemet\\_news\(\)](#), [dms2decdegrees\(\)](#)

**Examples**

```
first_day_of_year(2000)
last_day_of_year(2020)
```

---

get\_data\_aemet                    *Client tool for AEMET API*

---

**Description**

Client tool to get data and metadata from AEMET and convert json to [tibble](#).

**Usage**

```
get_data_aemet(apidest, verbose = FALSE)
get_metadata_aemet(apidest, verbose = FALSE)
```

**Arguments**

apidest                    Character string as destination URL. See <https://opendata.aemet.es/dist/index.html>.

verbose                    Logical TRUE/FALSE. Provides information about the flow of information between the client and server.

**Value**

A [tibble](#) (if possible) or the results of the query as provided by [httr2::resp\\_body\\_raw\(\)](#) or [httr2::resp\\_body\\_string\(\)](#).

**Source**

<https://opendata.aemet.es/dist/index.html>.

**See Also**

Some examples on how to use these functions on [vignette\("extending-climaemet"\)](#).

## Examples

```
# Run this example only if AEMET_API_KEY is detected

url <- "/api/valores/climatologicos/inventarioestaciones/todasestaciones"

get_data_aemet(url)

# Metadata

get_metadata_aemet(url)

# We can get data from any API endpoint

# Plain text

plain <- get_data_aemet("/api/prediccion/nacional/hoy")

cat(plain)

# An image

image <- get_data_aemet("/api/mapasygraficos/analisis")

# Write and read
tmp <- tempfile(fileext = ".gif")

writeBin(image, tmp)

gganimate::gif_file(tmp)
```

---

ggclimat\_walter\_lieth *Walter and Lieth climatic diagram on R*  
[hrefhttps://CRAN.R-project.org/package=ggplot2ggplot2](https://CRAN.R-project.org/package=ggplot2ggplot2)

---

## Description

Plot of a Walter and Lieth climatic diagram of a station. This function is an updated version of `climatol::diagwl()`, by Jose A. Guijarro.

## Usage

```
ggclimat_walter_lieth(  
  dat,  
  est = "",  
  alt = NA,  
  per = NA,  
  mlab = "es",
```

```

    pcol = "#002F70",
    tcol = "#ff0000",
    pfc0l = "#9BAEE2",
    sfcol = "#3C6FC4",
    shem = FALSE,
    p3line = FALSE,
    ...
)

```

### Arguments

<code>dat</code>	Monthly climatic data for which the diagram will be plotted.
<code>est</code>	Name of the climatological station.
<code>alt</code>	Altitude of the climatological station.
<code>per</code>	Period on which the averages have been computed.
<code>mlab</code>	Month labels for the X axis. Use 2-digit language code ("en", "es", etc.). See <a href="#">readr::locale()</a> for info.
<code>pcol</code>	Color for precipitation.
<code>tcol</code>	Color for temperature.
<code>pfc0l</code>	Fill color for probable frosts.
<code>sfcol</code>	Fill color for sure frosts.
<code>shem</code>	Set to TRUE for southern hemisphere stations.
<code>p3line</code>	Set to TRUE to draw a supplementary precipitation line referenced to three times the temperature (as suggested by Bogdan Rosca).
<code>...</code>	Other graphic parameters

### Details

See Details on [climatol::diagwl\(\)](#).

Climatic data must be passed as a 4x12 matrix or `data.frame` of monthly (January to December) data, in the following order:

- Row 1: Mean precipitation.
- Row 2: Mean maximum daily temperature.
- Row 3: Mean minimum daily temperature.
- Row 4: Absolute monthly minimum temperature.

See [climaemet\\_9434\\_climatogram](#) for a sample dataset.

### Value

A **ggplot2** object. See `help("ggplot2")`.

### API Key

You need to set your API Key globally using [aemet\\_api\\_key\(\)](#).

## References

- Walter, H. K., Harnickell, E., Lieth, F. H. H., & Rehder, H. (1967). *Klimadiagramm-weltatlas*. Jena: Fischer, 1967.

## See Also

`climatol::diagwl()`, `readr::locale()`

Other aemet\_plots: `climatestripes_station()`, `climatogram_normal()`, `climatogram_period()`, `ggstripes()`, `ggwindrose()`, `windrose_days()`, `windrose_period()`

Other climatogram: `climaemet_9434_climatogram`, `climatogram_normal()`, `climatogram_period()`

## Examples

```
library(ggplot2)

wl <- ggclimat_walter_lieth(
  climaemet::climaemet_9434_climatogram,
  alt = "249",
  per = "1981-2010",
  est = "Zaragoza Airport"
)

wl

# As it is a ggplot object we can modify it

wl + theme(
  plot.background = element_rect(fill = "grey80"),
  panel.background = element_rect(fill = "grey70"),
  axis.text.y.left = element_text(
    colour = "black",
    face = "italic"
  ),
  axis.text.y.right = element_text(
    colour = "black",
    face = "bold"
  )
)
```

## Description

Plot different "climate stripes" or "warming stripes" using **ggplot2**. This graphics are visual representations of the change in temperature as measured in each location over the past 70-100+ years. Each stripe represents the temperature in that station averaged over a year.

## Usage

```
ggstripes(  
  data,  
  plot_type = "stripes",  
  plot_title = "",  
  n_temp = 11,  
  col_pal = "RdBu",  
  ...  
)
```

## Arguments

data	a data.frame with date(year) and temperature(temp) variables.
plot_type	plot type (with labels, background, stripes with line trend and animation). Accepted values are "background", "stripes", "trend" or "animation".
plot_title	character string to be used for the graph title.
n_temp	Numeric value as the number of colors of the palette. (default 11).
col_pal	Character string indicating the name of the <code>hcl.pals()</code> color palette to be used for plotting.
...	further arguments passed to <code>ggplot2::theme()</code> .

## Value

A **ggplot2** object

## API Key

You need to set your API Key globally using `aemet_api_key()`.

## Note

"Warming stripes" charts are a conceptual idea of Professor Ed Hawkins (University of Reading) and are specifically designed to be as simple as possible and alert about risks of climate change. For more details see [ShowYourStripes](#).

## See Also

`climatestripes_station()`, `ggplot2::theme()` for more possible arguments to pass to `ggstripes`.

Other aemet\_plots: `climatestripes_station()`, `climatogram_normal()`, `climatogram_period()`, `ggclimat_walter_lieth()`, `ggwindrose()`, `windrose_days()`, `windrose_period()`

Other stripes: `climaemet_9434_temp`, `climatestripes_station()`

**Examples**

```
library(ggplot2)

data <- climaemet::climaemet_9434_temp

ggstripes(data, plot_title = "Zaragoza Airport") +
  labs(subtitle = "(1950-2020)")

ggstripes(data, plot_title = "Zaragoza Airport", plot_type = "trend") +
  labs(subtitle = "(1950-2020)")
```

ggwindrose

*Windrose (speed/direction) diagram***Description**

Plot a windrose showing the wind speed and direction using **ggplot2**.

**Usage**

```
ggwindrose(
  speed,
  direction,
  n_directions = 8,
  n_speeds = 5,
  speed_cuts = NA,
  col_pal = "GnBu",
  legend_title = "Wind speed (m/s)",
  calm_wind = 0,
  n_col = 1,
  facet = NULL,
  plot_title = "",
  ...
)
```

**Arguments**

speed	Numeric vector of wind speeds.
direction	Numeric vector of wind directions.
n_directions	Numeric value as the number of direction bins to plot (petals on the rose). The number of directions defaults to 8.
n_speeds	Numeric value as the number of equally spaced wind speed bins to plot. This is used if speed_cuts is NA (default 5).
speed_cuts	Numeric vector containing the cut points for the wind speed intervals, or NA (default).

<code>col_pal</code>	Character string indicating the name of the <code>hcl.pals()</code> color palette to be used for plotting.
<code>legend_title</code>	Character string to be used for the legend title.
<code>calm_wind</code>	Numeric value as the upper limit for wind speed that is considered calm (default 0).
<code>n_col</code>	The number of columns of plots (default 1).
<code>facet</code>	Character or factor vector of the facets used to plot the various windroses.
<code>plot_title</code>	Character string to be used for the plot title.
<code>...</code>	further arguments (ignored).

**Value**

A **ggplot2** object.

**API Key**

You need to set your API Key globally using `aemet_api_key()`.

**See Also**

`ggplot2::theme()` for more possible arguments to pass to `ggwindrose`.

Other `aemet_plots`: `climatestripes_station()`, `climatogram_normal()`, `climatogram_period()`, `ggclimat_walter_lieth()`, `ggstripes()`, `windrose_days()`, `windrose_period()`

Other `wind`: `climaemet_9434_wind`, `windrose_days()`, `windrose_period()`

**Examples**

```
library(ggplot2)

speed <- climaemet::climaemet_9434_wind$velmedia
direction <- climaemet::climaemet_9434_wind$dir

rose <- ggwindrose(
  speed = speed,
  direction = direction,
  speed_cuts = seq(0, 16, 4),
  legend_title = "Wind speed (m/s)",
  calm_wind = 0,
  n_col = 1,
  plot_title = "Zaragoza Airport"
)
rose + labs(
  subtitle = "2000-2020",
  caption = "Source: AEMET"
)
```

---

windrose_days	<i>Windrose (speed/direction) diagram of a station over a days period</i>
---------------	---

---

### Description

Plot a windrose showing the wind speed and direction for a station over a days period.

### Usage

```
windrose_days(
  station,
  start = "2000-12-01",
  end = "2000-12-31",
  n_directions = 8,
  n_speeds = 5,
  speed_cuts = NA,
  col_pal = "GnBu",
  calm_wind = 0,
  legend_title = "Wind Speed (m/s)",
  verbose = FALSE
)
```

### Arguments

station	Character string with station identifier code(s) (see <a href="#">aemet_stations()</a> ) or "all" for all the stations.
start	Character string as start date (format: "YYYY-MM-DD").
end	Character string as end date (format: "YYYY-MM-DD").
n_directions	Numeric value as the number of direction bins to plot (petals on the rose). The number of directions defaults to 8.
n_speeds	Numeric value as the number of equally spaced wind speed bins to plot. This is used if speed_cuts is NA (default 5).
speed_cuts	Numeric vector containing the cut points for the wind speed intervals, or NA (default).
col_pal	Character string indicating the name of the <a href="#">hcl.pals()</a> color palette to be used for plotting.
calm_wind	Numeric value as the upper limit for wind speed that is considered calm (default 0).
legend_title	Character string to be used for the legend title.
verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.

### Value

A **ggplot2** object.

**API Key**

You need to set your API Key globally using `aemet_api_key()`.

**See Also**

`aemet_daily_clim()`

Other aemet\_plots: `climatestripes_station()`, `climatogram_normal()`, `climatogram_period()`, `ggclimat_walter_lieth()`, `ggstripes()`, `ggwindrose()`, `windrose_period()`

Other wind: `climaemet_9434_wind`, `ggwindrose()`, `windrose_period()`

**Examples**

```
windrose_days("9434",
  start = "2000-12-01",
  end = "2000-12-31",
  speed_cuts = 4
)
```

---

windrose\_period

*Windrose (speed/direction) diagram of a station over a time period*

---

**Description**

Plot a windrose showing the wind speed and direction for a station over a time period.

**Usage**

```
windrose_period(
  station,
  start = 2000,
  end = 2010,
  n_directions = 8,
  n_speeds = 5,
  speed_cuts = NA,
  col_pal = "GnBu",
  calm_wind = 0,
  legend_title = "Wind Speed (m/s)",
  verbose = FALSE
)
```

**Arguments**

station	Character string with station identifier code(s) (see <code>aemet_stations()</code> ) or "all" for all the stations.
start	Numeric value as start year (format: YYYY).

end	Numeric value as end year (format: YYYY).
n_directions	Numeric value as the number of direction bins to plot (petals on the rose). The number of directions defaults to 8.
n_speeds	Numeric value as the number of equally spaced wind speed bins to plot. This is used if speed_cuts is NA (default 5).
speed_cuts	Numeric vector containing the cut points for the wind speed intervals, or NA (default).
col_pal	Character string indicating the name of the <code>hcl.pals()</code> color palette to be used for plotting.
calm_wind	Numeric value as the upper limit for wind speed that is considered calm (default 0).
legend_title	Character string to be used for the legend title.
verbose	Logical TRUE/FALSE. Provides information about the flow of information between the client and server.

### Value

A **ggplot2** object

### API Key

You need to set your API Key globally using `aemet_api_key()`.

### See Also

[aemet\\_daily\\_period\(\)](#)

Other `aemet_plots`: [climatestripes\\_station\(\)](#), [climatogram\\_normal\(\)](#), [climatogram\\_period\(\)](#), [ggclimat\\_walter\\_lieth\(\)](#), [ggstripes\(\)](#), [ggwindrose\(\)](#), [windrose\\_days\(\)](#)

Other wind: [climaemet\\_9434\\_wind](#), [ggwindrose\(\)](#), [windrose\\_days\(\)](#)

### Examples

```
windrose_period("9434",
  start = 2000, end = 2010,
  speed_cuts = 4
)
```
