教学大纲及教学日历 SYLLABUS

15. 教学目标 Course Objectives

植物生理学是生物系开设的一门专业选修课，旨在帮助学生了解植物的主要生理过程、基本生命活动规律及相关的分子调控机制。

Plant physiology is one of electives in biology. The primary purpose of this course is to help students understand how plants work, involving the basic physiological processes and the underlying molecular mechanisms.

16. 预达学习成果 Learning Outcomes

通过本课程的学习，学生可以理解植物结构与功能的一致性，认识并掌握植物能量代谢与光合作用、生长发育与形态结构建成，植物与环境相互作用等主要知识内容；进而认识到植物对于解决目前人类面临的粮食问题、环境问题和能源问题的重要性。

During this course you will learn the coordination between plant structure and function, and gain a basic understanding of how plants function, including plant photosynthesis and bioenergetics, plant growth and development, plant response to different environmental factors, etc. With study of this course, you will recognize that plants can be exploited to improve environment as well as the supply of food and energy we live on.
